ENES BERKE INAL

Senior Full-Stack Engineer

Istanbul, Turkey | +90 546 481 6900 | enesberke2@gmail.com

GitHub | LinkedIn | YouTube

PROFESSIONAL SUMMARY

5+ years of experience in building scalable distributed systems, AI-powered platforms, and real-time applications. Expert in TypeScript (Node.js/NestJS) and React, with professional proficiency in Go and AWS cloud infrastructure. Strong background in microservices architecture, event-driven systems, and LLM integrations. Transitioned from a high-impact SDET background, ensuring a quality-first approach to software engineering, performance optimization, and system reliability.

TECHNICAL SKILLS

Languages:	TypeScript, JavaScript, Go (Golang), Java, SQL
Backend & Arch:	Node.js, NestJS, Express, Spring Boot, Microservices, System Design, SOLID, Clean Architecture, RESTful APIs
Frontend:	React, React Native, Next.js, Tailwind CSS
Databases & Cache:	PostgreSQL, MongoDB, Couchbase, Redis, DynamoDB, Kafka, Prisma ORM
Cloud & DevOps:	Docker, Kubernetes, GitLab, CI/CD (GitHub Actions), Distributed Systems, AWS, Nx Monorepo, OpenTelemetry, Microservices
AI & Real-time:	Cursor, Claude, LLM Integration (OpenAI, Gemini)
Testing & Quality:	Cypress, Jest, Selenium, REST Assured

PROFESSIONAL EXPERIENCE

Bolt Insight | London, UK (Remote) – *Full-Stack Developer* *Dec 2025 – Present*

- Developing an AI-powered analytics and chat platform utilizing 15+ NestJS microservices and React applications within an Nx monorepo, accelerating feature delivery and team velocity.
- Architecting agentic AI workflows, integrating OpenAI and Google Gemini for automated business logic and intelligent data processing.
- Building real-time messaging and notification subsystems with Redis Pub/Sub and AWS SQS for asynchronous processing, incorporating OpenTelemetry for distributed tracing to effectively handle high-throughput concurrent events.
- Engineered a custom TypeScript automation engine that processes complex survey datasets and dynamic UI elements (handling precise box indexing and custom line spacing logic) directly into structured presentation layouts, completely eliminating manual slide formatting. (TypeScript, DOM Manipulation, Data Parsing)
- Designing shared TypeScript libraries (database access, queue management) to standardize services across the ecosystem and reduce code redundancy.

Trendyol - Alibaba Group | Remote – *Software Engineer* *Sep 2023 – Nov 2025*

- Engineered high-traffic distributed backend systems using NestJS, Kafka, and PostgreSQL, serving 2M+ daily active users with high availability.
- Developed performant web and mobile (React Native) interfaces for core e-commerce flows, enhancing user experience and streamlining the checkout process.
- Contributed to a polyglot microservices environment involving TypeScript, Go (Golang), and Java (Spring), orchestrating secure cross-service communication.

- Optimized system reliability by implementing Clean Architecture principles and increasing automated test coverage by over 40%.

Trendyol - Alibaba Group | Remote – *Software Developer in Test (SDET)* *Apr 2021 – Sep 2023*

- Architected a robust UI test automation framework using Cypress and Selenium, reducing manual regression testing time by 60%.
- Spearheaded API automation and performance testing for critical payment and checkout services, proactively preventing bottlenecks during peak traffic events.
- Orchestrated isolated test environments utilizing Docker and Kubernetes, and efficiently triaged production issues using New Relic and Kibana.

EDUCATION

Çukurova University – B.Sc. in Computer Engineering (100% English) *2016 – 2021*

CERTIFICATIONS & COMMUNITY

- **Certifications:** GNU/Linux System Management, Google Cloud Fundamentals
- **Languages:** Turkish (Native), English (C1 Reading, B2 Writing/Speaking)
- **Community:** GDG Adana Organizer (2017-2019), Google Cloud Study Jam Lead
